- **Activity 1.3: Validate Gemini API connectivity**
    - Make a sample prompt call using Python to confirm integration.

```
from google import genai
from google.genai import types
from PIL import Image
from io import BytesIO
import base64

client = genai.Client(api_key="AIzaSyOdzrZAflstX1Q")

contents = ("Generate a detailed 2D architectural floor plan for a modern two-story house with a total area of 150 meters in length and 20 meters")

response = client.models.generate_content(
   model="gemini-2.0-flash-exp-image-generation",
   contents=contents,
   config=types.GenerateContentConfig(
      response_modalities=["Text", "Image"]
   )
)

for part in response.candidates[0].content.parts:
   if part.text is not None:
      print(part.text)
```

```
    elif part.inline_data is not None:
        image = Image.open(BytesIO(part.inline_data.data))
        image.save("gemini-native-image.png")
        image.show()
```

- Test both text-only and image + text prompts to ensure multimodal compatibility.
