- **Activity 3.4: Startup and main function**
  /startup: Initializes essential application services and loads configuration settings when the FastAPI server starts.

```
@app.on_event("startup")
async def startup_event():
  setup_session_cleanup()

"""Background task to clean up expired sessions"""
async def cleanup_expired_sessions():
      while True:
      current_time = datetime.utcnow()
      # Check for sessions that have been inactive for more than 30 minutes
      expired_sessions = [
      username for username, session in active_sessions.items()
      if (current_time - session.last_activity).total_seconds() > 1800  # 30 minutes
      ]

    # Remove expired sessions
    for username in expired_sessions:
      if username in active_sessions:
        print(f"Removing expired session for {username}")
        del active_sessions[username]

    # Wait for 5 minutes before checking again
    await asyncio.sleep(300)

# Start the background task
asyncio.create_task(cleanup_expired_sessions())
```

__main__: Entry point of the FastAPI application that starts the server using uvicorn when the script is run directly.

```
#Main entry point
If_name_==”_main_”:
  Improve uvicorn
  Print(Starting pocketSmart: AI Budget palnner...”)
  Unicorn.run(app,host=”0.0.0.0”,post=8000)
```
